

InterDry[®] reduces cost and treatment time compared to antifungal treatment protocols¹

Economic concerns of ITD

Some experts contend that prevention is a more appropriate alternative to treatment and recommend a number of preventive strategies. For example, patients are advised to control blood sugar, use cotton undergarments, lose weight, avoid tight clothing and avoid unnecessary antibiotic or steroid use. Experts suggest keeping the area dry and exposed to the air as much as possible to prevent recurrences.

As indicated in the McMahon study, many individuals have resolution of the ITD once their general

conditions improve. However, recurrence of ITD is common. Recurrences lead to direct and indirect costs. Indirect costs include time from work, home and family; travel time to providers; embarrassment from odor; threats to productivity due to discomfort; frustration and more. Direct costs might include dressings, antibiotics, laboratory studies, home, office or acute care, expenses not covered by the patient's insurance carrier and more. Skin fold management has become an ongoing struggle for many individuals from a humanistic, clinical and economic perspective.²

Economic value case study 1¹

Patient description: 46-year-old female receiving rehabilitation (physical therapy and weight loss) for morbid obesity (BMI 93.8).

Symptoms: Candidal intertrigo located in the right posterior thigh, which has been present for the past 98 days.

	Antimicrobial cream, antifungal cortisone and antifungal powder	InterDry protocol
Erythema score	3 - Severe	1 - Slight
Denudement	Yes	No
Maceration	Yes	No
Satellite lesions	Yes	No
Itching/burning	Yes	No
Odor score	1 - Slight	0 - None
Duration	98 days	5 days
Cost/week	\$23.84	\$7.63
Total cost	\$333.76	\$7.63

Total cost savings of

\$326.13

Resolution time

5 days

Poster presented at: 20th Annual Symposium on Advanced Wound Care; April 28 - May 1, 2007; Tampa, FL and 39th WOCN[®] Society Annual Conference; June 9-13, 2007; Salt Lake City, UT.

2. Sibbald RG, Kelly J, Kennedy-Evans KL, Labrecque C, Waters N. A practical approach to the prevention and management of intertrigo, or moisture-associated skin damage, due to perspiration: expert consensus on best practice. *Wound Care Canada - Supplement*. 2013;11(2):1-21

Economic value case study 2¹

Patient description: 34-year-old female receiving rehabilitation (weight loss and physical therapy) with morbid obesity (BMI 61.1).

Symptoms: Candidal intertrigo in the right popliteal area, which has been present for the past thirty-three (33) weeks.

	Antifungal ointment	InterDry protocol
Erythema score	3 - Severe	1 - Slight
Denudement	Yes	Yes: skin is fragile and tears easily
Maceration	Yes	No
Satellite lesions	Yes	No
Itching/burning	Yes	No
Odor score	2 - Moderate	0 - None
Duration	231 days	5 days
Cost/week	\$4.35	\$8.33
Total cost	\$143.55	\$8.33

Total cost savings of
\$135.17
 Resolution time
5 days

Economic value case study 3¹

Patient description: 53-year-old female with morbid obesity (BMI 62.8), angina, pulmonary embolism, venous insufficiency and bipolar disorder.

Symptoms: Intertrigo under the left breast, which has been present for twelve (12) weeks.

	Antifungal powder x2 daily and PRN	InterDry protocol
Erythema score	3 - Severe	1 - Slight: dry flaking skin continues
Denudement	Yes	No
Maceration	Yes	No
Satellite lesions	Yes	No
Itching/burning	Yes	No
Odor score	1 - Minimal	0 - None
Duration	84 days	5 days
Cost/week	\$8.68	\$2.77
Total cost	\$104.16	\$2.77

Total cost savings of
\$101.39
 Resolution time
5 days
